- . The objective of the game is to manuever the Bagman thru the various mine shafts picking up the various money bags and placing the money bags in the wheelbarrow which is at the surface of the mine.
- . The money bag bonus is time operated. When a money bag is picked up and placed in the wheelbarrow, whatever bonus is showing at that time is awarded. The bonus then reverts back to its original money bag value and decrements with time. If no money bags are put in the wheelbarrow and the bonus has decremented to zero, the player(s) forfeits a life.
- . While climbing thru the mine shafts, the Bagman must avoid the pursuing guards, the moving ore carts and the descending elevator.
- . The guards may be temporarily stunned by striking them with a pickaxe or by dropping a money bag on them when they are on the same ladder as the Bagman.
- . The Bagman may move horizontally at the surface, in the shafts and via the ore cart from rack to rack with or without the wheelbarrow.
- . The Bagman is moved horizontally and vertically by the 4-way joystick. The joystick is also used to jump out of the ore cart.
- . The Action Button is used to make the Bagman perform the following tasks:
 1. Pick up and drop the money bags.
 2. Pick up and drop the pickaxe.
 3. Grab and release the ceiling beam to avoid the ore cart. This can be done while carrying a money bag.
NOTE: The Bagman when releasing from the ceiling beam ~~may~~ drop down to the mine shaft or into the ore cart. This can be done while carrying a money bag.
 4. Placing a money bag in the wheelbarrow.
 5. Pick up and drop the wheelbarrow.
- . Scoring: Points are scored for each horizontal step the Bagman takes, for each money bag placed in the wheelbarrow, and for each guard stunned.

GAMES HAVE BEEN FACTORY SET WITH THE DIP SWITCHES IN THE
 ASTERISK POSITION AS SHOWN ON THE CHART BELOW.
